

Your Unified Telemetry Platform

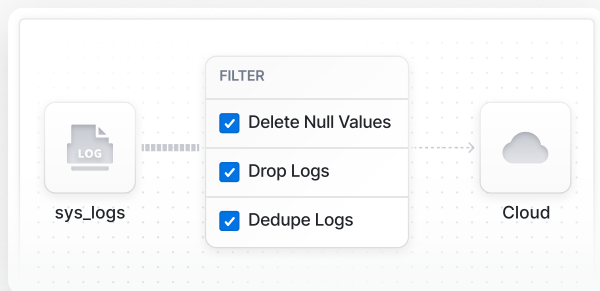

Reduce your observability costs by 40% or more, route your telemetry from any source to any destination, and manage your entire fleet of agents.

Use cases

Customizable solutions for your needs

Get flexible solutions that fit your environment and give you full control of your observability data.

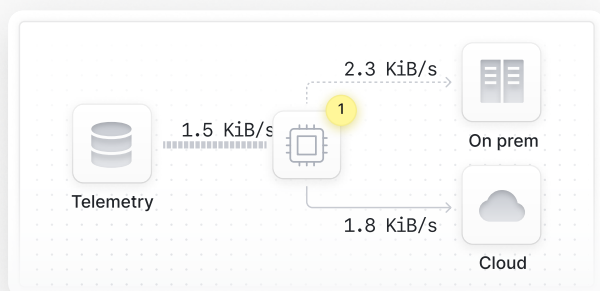

1

Reducing Log Volumes

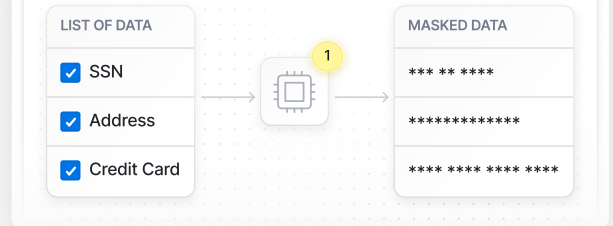

Address overwhelming log data with BindPlane. We efficiently filter unnecessary log data, aiding resource management and enhancing system performance.

Redact and Mask Sensitive Data

Remove or encrypt sensitive data before it leaves your servers, making compliance and security simple.

2

3

Streamline Cloud Migration

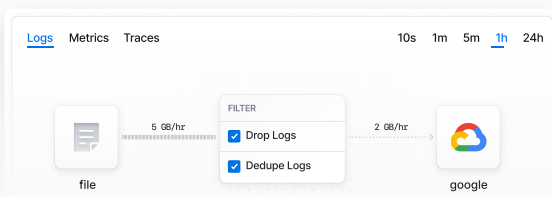

Transition to the cloud seamlessly with BindPlane. We make cloud migration smooth and efficient, reducing downtime and ensuring data continuity.

A complete observability pipeline

Empowering the modern observability team by transforming and simplifying telemetry operations to improve efficiency and ease-of-use.

Reduce

Trim log volume via filtering, direct compliance data to affordable storage, and analyze only high-value logs.

Standardize

Standardize your observability on OpenTelemetry, an open source standard, and avoid vendor lock-in.

Enterprise Grade

Designed for complex environments with high availability, RBAC, SSO, 24/7 support, and enterprise scalability.

Simplify

With BindPlane, the era of multiple agents ends. Now, gather metrics, logs, and traces using just one agent.

AGENTS Filters Install Agents				
NAME	STATUS	LOGS	METRICS	TRACES
k8s-prod-east	Connected	7 KiB/s	17.5 MiB/s	628.4 B/s
app-store-north	Success	7 KiB/s	16.4 MiB/s	630.7 B/s
google-stage	Disconnected	7 KiB/s	17.5 MiB/s	628.1 B/s

Proud Contributor to the OpenTelemetry Project

OpenTelemetry is a collaborative project founded by the Cloud Native Computing Foundation to create industry-wide standards that will benefit all cloud service providers.
